

What is Hail Damage Costing You?

Some states average 1,000 hail events per year. These events cause millions of dollars of serious damage to HVAC equipment. Hail flattens fins and impairs operation with:

- Reduced Air Flow
- Strained Motors and Compressors
- Raised Power Consumption

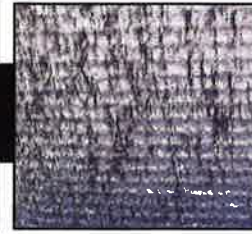

Often a unit will fail completely after a few months of minimized air flow. Energy dollars are wasted and equipment repair or replacement dollars are spent. HailStop® is easily installed on any equipment to prevent this damage.

HAIL GUARD NETTING

GOOD A/C FINS

CRUSHED FINS

EASY FIX HailStop®

Lightweight and easy to install, the rigid polypropylene netting deflects airborne objects and debris such as hail. Unique mount clips are easily attached to the equipment. HailStop fits onto clips and the moveable tab closes into locking position. Sold in single job kits and master rolls, netting can be cut-to-size with sissors or a utility knife. Netting can be used alone as hail guard or layered behind PreVent® Equipment Protection Filters for added air intake protection.

- **UV Protected**
- **Rot Resistant**
- **Weather Resistant**
- **Abrasion and Corrosion Resistant**

Model #HailStop 10

For units up to 10 Tons (54" H X 10' L)
Kit includes pack of 12 mounts & SS screws

Model #HailStop 20

For units up to 20 Tons (54" H X 20' L)
Kit includes pack of 24 mounts & ties
for horizontal or vertical installations

Model #HailStop 50

Master Roll (54" H X 50' L)

Model MountKit-S100

Pack of 100 mounts & SS screws

Moveable tab opens & closes for secure installation & easy removal to clean.

Double height mount kit available for HailStop & PreVent Filter together.
