

## Stainless Steel Metal Mesh Mist Eliminator – Oil Mist or Water Droplets

Collect oil mist found in return air in industrial machine shops, water droplets from cooling coils, evaporative media or unevaporated moisture downstream from humidifiers and divert the liquid to an appropriate drain.

The filtering media consists of layers of stainless steel slit and expanded into mesh of differing densities with hundreds or baffle-like surfaces. Filter contains multiple layers of mesh and screen wire contained within a 304 stainless steel one piece constructed roll formed frame. Frame contains drain holes on all sides. Metal is heavy duty in weight, resists corrosion and works well in high heat applications. Bail, lock-type or rigid handles are available upon request.

Can be cleaned with steam or hot water applied with a pressure hose. Any cleaning solution is acceptable as heavy metal is extremely resilient.

- Maximum temperature 900°
- U/L Classified as to Flammability Only
- 5 Year Warranty
