PERMA|COOL™

Cut-to-Fit Electrostatic Air Filter

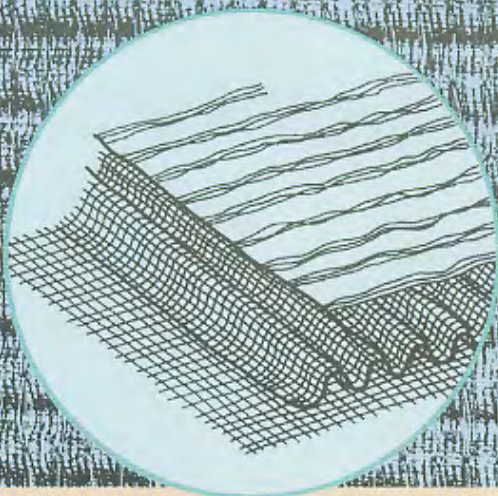

COOL...CLEAN AIR

It's the relief you expect from your air conditioning unit and the relief you get from Permatron's **NEW** PermaCool electrostatic air filter. PermaCool is a unique 1/4" corrugated polypropylene filtration media whose electrostatic charge assists in removing dust, lint, pollen and other irritating pollutants from the air in your environment.

EASY TO USE...AND REUSE

PermaCool is available in a 15" x 24" sheet for single use in standard wall/window air conditioning units or 10' rolls (in various widths) for PTAC or multiple unit usage. Simply measure the existing disposable air filter currently in your unit and trim a PermaCool filter pad to fit! Every 30 days, the filter should be rinsed or vacuum cleaned. PermaCool's polypropylene media will not degrade over time as foam does.

LIFETIME WARRANTY

PermaCool's dense, 3 layer, 1/4" waffle weave configuration (as shown above) enhances its filtration abilities and creates a rigid/durable electrostatic air filter with the convenience of a cut-to-fit solution. Unlike other media which may compress and restrict air flow, PermaCool retains its low resistance design after installation.
